**Subject:** Authorization Granted: 5850-5895 MHz Emergency STA Request - Brady Communications, LLC  
**Attachments:** FCC5850-5895.pdf

Mr. Benner,

The application for an emergency STA filed by Brady Communications, LLC on April 3, 2020 is granted via this email. The applicant will be using the 5850-5895 MHz band to provide relief during the state-of-emergency caused by the spread of COVID-19 throughout the United States. Applicant is advised that it must ensure proper protection of incumbents in the 5850-5895 MHz band and otherwise comply with the conditions described below.

This grant is for a period of 60 days, provided the applicant files a complete FCC Form 601 application for an STA to continue its operations in the 5850-5895 MHz band within 10 days of today's date (April 9, 2020). If applicant fails to file a complete FCC Form 601 application by this date, its STA will terminate at midnight on that date. Applicant's use of the 5850-5895 MHz band is authorized on a non-interference basis and is limited by the conditions described below.

By utilizing the 5850-5895 MHz band pursuant to this STA, the applicant agrees to the following conditions:

- It understands that operations under this STA are subject to the general conditions of operation set forth in Section 15.5 of the Commission's rules (including that its access is non-exclusive and not subject to interference protection). STA recipients with overlapping grants must work together to resolve interference concerns.
- It is responsible for ensuring that it does not cause interference to existing licensees. It must review existing DSRC licenses in this band to determine any nationwide, statewide, or countywide licenses that cover or are adjacent to its service area, as well as any site licenses that are near that service area. It must then contact each of these affected licensees before beginning operation and provide its contact information so that the licensee can inform it of interference issues. It may then begin operation; it need not await a response or approval. If a complaint of interference cannot be timely resolved, operation under this STA must cease. It may not operate within 2 kilometers of any site license, regardless of notification or actual interference.
- It will operate consistent with the power levels in Section 15.407(a)(3) of the Commission's rules.
- It will attenuate emissions at 5895 MHz to a level of -27dBm or less.
- It understands that any emergency STA grant is conditioned on the applicant filing a formal STA application on FCC Form 601 (Radio Service Code QQ) within 10 days of emergency STA grant. As part of that filing, it must provide a phone number which connects directly to a person who is able to immediately resolve any interference concerns arising from its operations pursuant to this STA.
- Upon expiration of this STA, it will cease operating in the 5850-5895 MHz band and retune equipment to operate in compliance with the Commission's equipment certifications; it will confirm with the

Bureau within 14 days of expiration that it has successfully retuned all of its devices to be compliant with Commission certifications.

- It understands that operations under this STA shall protect federal radiolocation services operating in the 5850-5895 MHz band and, to afford such protection, operations under this STA are prohibited within 75 kilometers of the locations listed in the table below and any additional sites specified by the Commission after initial grant.
- It understands that any structure utilized to operate pursuant to this STA must comply with the height limitations specified in Section 17.7 of the Commission's rules or must be registered with the FAA.

The following are federal radiolocation services locations. Operations under this STA are not permitted within 75 kilometers of these locations:

<b>Location</b>	<b>State</b>	<b>Latitude</b>	<b>Longitude</b>
Ft. Rucker	AL	311947N	0854255W

Brady Communications

Request for Special Temporary Authority

**Brady Communications, LLC**  
In accordance with the FCC's rules 47 CFR, Brady Communications, LLC is requesting Special Temporary Authority to deploy and provide point-to-multipoint services in the following counties in Texas:

McCullough

Mason

Concho

Menard

Kimble

San Saba

Brown

Llano

Gillespie

Coleman

Brady Communications would like to utilize the 5850-5895 Mhz band on a temporary basis for a period of 60 days. Grant of a STA would be consistent with the Commission's March 27<sup>th</sup> 2020 grant of an Emergency STA to 33 fixed wireless broadband providers ("WISP STA") and will help us meet a new surge in customer demand following the COVID-19 pandemic.

Brady Communications is a fixed wireless internet service provider servicing the rural parts of central Texas with High Speed Data and Voice over IP services. We service residential, commercial, small to medium business, local emergencies services, and public works offerings. We rely heavily on unlicensed spectrum to last mile to our customers, predominantly in the 5ghz bands. Many of our customers have little to no access to alternative sources of true broadband.

With the spread of COVID-19 and the increase in the communities need to partake in social distancing, more and more of our customers are needing increased bandwidth, on top of a growing number of new customers needing new, or faster internet that others in the area cannot provide. This trend is expected to continue for at least the next several weeks as more and more people realize that they're going to need increased access to bandwidth.

**Brady Communications, LLC**

In many places, Brady Communications will require additional spectrum in order to facilitate this surge in growth. This added spectrum will allow for additional customers to be added per service location, or for spectrum to be re-allocated to bring in more bandwidth to their communities.

The FCC has rules and guidelines for in place to grant an STA as requested above, specifically when the grant would further serve public interest, and in such instances where the delay could seriously hamper public interest.

Brady Communications respectfully submits that the grant of this request meets that standard and is in the best public interest. Emergency use of the 45mhz in the 5850-5895 megahertz band will be the best solution for helping to meet the needs of this increased demand for broadband internet services. As time goes on, and more and more people are required to take steps towards social distancing. This will lead to more and more need of customers to work from home, but also for their children to be able to keep on their school work, and interact with their classroom peers. We regularly find that despite our best efforts, other regularly accessible unlicensed bands are too congest to meet the ongoing demands of this growth. Brady Communications has access to FCC-certified gear that can be quickly and easily software tuned to operate in the 5850-5895 Mhz band. Much of our equipment can easily be re-tuned or upgraded from remote, thus allowing Brady Communications to both upgrade our customers access, and participate in our best effort of Social Distancing while still serving our community.

Consistent with the WISP STA, Brady Communications understands that all of the following conditions may apply to our STA.

- It understands that operations under this STA are subject to the general conditions of operation set forth in Section 15.5 of the Commission's rules.
- It is responsible for ensuring that it does not cause interference to existing licensees. It must review existing DSRC licenses in this band to determine any nationwide, statewide, or countywide licenses that cover or are adjacent to its service area, as well as any site

**Brady Communications, LLC**

licenses that are near that service area. It must then contact each of these affected licensees before beginning operation and provide its contact information so that the licensee can inform it of interference issues. It may then begin operation; it need not await a response or approval. If a complaint of interference cannot be timely resolved, operation under this STA must cease. It may not operate within 2 kilometers of any site license, regardless of notification or actual interference.

- It will operate consistent with the power levels in Section 15.407(a)(3) of the Commission's rules.
- It will attenuate emissions at 5895 MHz to a level of -27dBm or less.
- Upon expiration of this STA, it will cease operating in the 5.8 GHz band and retune equipment to operate in compliance with the Commission's equipment certifications; it will confirm with the Bureau within 14 days of expiration that it has successfully retuned all of its devices to be compliant with Commission certifications.

It understands that operations under this STA shall protect federal radiolocation services operating in the 5.8 GHz band and, to afford such protection, operations under this STA are prohibited within 75 kilometers of designated federal locations and any additional sites specified by the Commission after initial grant.

- It understands that any structure utilized to operate pursuant to this STA must comply with the height limitations specified in Section 17.7 of the Commission's rules or must be registered with the FAA.

Should the commission have any questions or need additional information please contact me about this matter.
